Pharmacy Delivery

Pharmacy delivery services offer a convenient way to get prescription medications and over-the-counter products. Customers can place an order by calling, going online or through an app, and the pharmacy will deliver the medications to the customer's doorstep after verifying the prescription. Pharmacies also offer Mail Order pharmacy delivery, where prescription medications and sometimes over-the-counter medications are shipped through the mail or courier services directly to the customer's address.

Medication Box: a container of package in which a customer's prescription medications are dispensed. These boxes are designed to securely hold and label the prescribed medications for easy dispensing.

Blister Pack: a type of packaging with small sealed compartments that hold individual doses of medication. It helps patients manage their medication schedule, offers tamper-evident security, and protects medications from environmental factors. These packs are widely used to help patients manage their medication schedule, ensure convenience, and safety in medication administration.

Medication Cassette: Pharmacist professionals load the cassettes with medications, which are then dispensed to the appropriate patients
